

nature chemistry

Associate Editor based in Tokyo

// 欢迎能说中文的化学家申请加入《自然》大家庭的最新成员——《自然化学》 //

Nature Publishing Group (NPG) is pleased to announce the launch of *Nature Chemistry* in 2009. Following the success of *Nature Materials*, *Nature Chemical Biology* and *Nature Physics*, and given the strength of the parent journal *Nature*, we fully expect *Nature Chemistry* to seize the commanding heights of the chemistry-publishing landscape. For more information on *Nature Chemistry*, please visit www.nature.com/naturechemistry.

As part of NPG's expanding publishing programme in chemistry we are now seeking an additional Associate Editor, to be based in our Tokyo office, to work on *Nature Chemistry* and a number of publishing projects based in the Asia-Pacific region.

Applicants should have a PhD in chemistry, or an applied chemistry discipline, with demonstrable research achievements. Although postdoctoral experience is preferred (not required), emphasis will be placed on broadly trained applicants with a good knowledge of the chemistry community. Key elements of the position include the selection of manuscripts for publication, and commissioning, editing and writing other content for the journal and other publishing projects.

The ideal candidate will be able to demonstrate a good understanding of the East Asian research communities (in particular Japan, China and Korea) as well as being fluent in English and preferably (desired, but not required) an Asian language (Japanese, Chinese or Korean).

This is a demanding and extremely stimulating role, which calls for a keen interest in the practice and communication of science. The successful candidate will, therefore, be dynamic, motivated and outgoing, and must possess excellent interpersonal skills. The salary and benefits, will be competitive, reflecting the critical importance and responsibilities of this position.

Applicants should send a CV (including their class of degree and a brief account of their research and other relevant experience), a News & Views style piece (no more than 500 words) on a recent paper from the chemical literature, and a brief cover letter explaining their interest in the post and salary expectations.

Contact Details:

To apply please send your CV and covering letter, quoting reference number **NPG/LON/855** to Denise Pitter at londonrecruitment@macmillan.co.uk
